

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. (Currently amended) A method for analysing a heterogeneous sample of ~~peptides, or protein or peptide fragments~~ proteins, peptides, protein fragments or peptide fragments, the method comprising:
 - (a) separating the heterogeneous sample of ~~peptides, or protein or peptide fragments~~ proteins, peptides, protein fragments or peptide fragments, into heterogeneous classes by binding members of each class to a spaced apart defined location on an array, wherein more than one ~~peptide, or protein or peptide fragment~~ protein, peptide, protein fragment or peptide fragment binds to each defined location on the array, and wherein members of each class have a motif common to that class; and
 - (b) characterising the ~~peptides, or protein or peptide fragments~~ proteins, peptides, protein fragments or peptide fragments, in each class by determining the mass of the ~~peptides, or protein or peptide fragments~~ proteins, peptides, protein fragments or peptide fragments in the ~~heterogeneous~~ heterogeneous classes, and determining the abundance of ~~peptides, or protein or peptide fragments~~ proteins, peptides, protein fragments or peptide fragments, of different mass in the heterogeneous classes.
2. (Currently amended) A method according to ~~Claim~~ claim 1 wherein the heterogeneous sample of ~~peptides, or protein or peptide fragments~~ proteins, peptides, protein fragments or peptide fragments, is an extract of the total protein content of a cell or tissue type.
3. (Currently amended) A method according to ~~Claim~~ claim 1 wherein, prior to performing step (a), ~~the heterogeneous sample of fragments is formed by fragmenting a~~ in the heterogeneous sample of proteins or peptides the proteins and peptides in the heterogeneous sample are fragmented to form protein fragments and peptide fragments.
4. (Currently amended) A method according to ~~Claim~~ claim 3 wherein the fragmenting is performed by chemical or enzymatic cleavage.

5. (Currently amended) A method according to ~~Claim~~ claim 3 wherein the fragmenting is performed using a sequence-directed cleavage mechanism.
6. (Currently amended) A method according to ~~Claim~~ claim 3 wherein the fragmenting is performed by digestion of the heterogeneous sample of proteins or peptides with trypsin.
7. (Currently pending) A method according to claim 1 wherein the motif in each peptide, or protein or peptide fragment, is at the same location in each peptide, or protein or peptide fragment, relative to the C-terminus, the N-terminus, or an internal feature.
8. (Currently amended) A method according to claim 1 wherein the heterogeneous sample is a heterogeneous sample of ~~fragments of proteins or peptides~~ protein fragments or peptide fragments and the motif in each fragment is at the same location in each fragment, relative to the site of cleavage.
9. (Currently pending) A method according to claim 1 wherein the motif in each peptide, or protein or peptide fragment, is three, four, five, six or more amino acids in length:
10. (Currently pending) A method according to claim 1 wherein the motif contains three, four or five variable amino acids, the other amino acids in the motif being constant between all peptides, or protein or peptide fragments.
11. (Currently pending) A method according claim 1 wherein the motif is at the C-terminus.
12. (Withdrawn) A method according to claim 1 wherein the motif is at the N-terminus.
13. (Currently pending) A method according to claim 1 wherein the array comprises a number of different types of binding molecule, each type immobilised at a spaced apart defined location on the array, wherein each type of binding molecule is capable

of binding specifically to a motif and wherein different types of binding molecule have different binding specificities.

14. (Currently amended) A method according to ~~Claim claim~~ 13 wherein the number of different types of binding molecule provided on the array is suitable to capture at least 10% of the peptides in the heterogeneous sample prior to fragmentation ~~unfragmented sample~~ or, where the sample is a heterogeneous sample of ~~fragments of proteins or peptides~~ protein fragments or peptide fragments, at least one fragment from at least 10% of the proteins or peptides in the unfragmented heterogeneous sample.
15. (Withdrawn) A method according to Claim 13 wherein the number of different types of binding molecule provided on the array is suitable to capture at least 50% of the proteins or peptides in the unfragmented sample or, where the sample is a heterogeneous sample of fragments of proteins or peptides, at least one fragment from at least 50% of the proteins or peptides in the unfragmented sample.
16. (Withdrawn) A method according to Claim 13 wherein the number of different types of binding molecule provided on the array is suitable to capture substantially 100% of the proteins or peptides in the unfragmented sample or, where the sample is a heterogeneous sample of fragments of proteins or peptides, at least one fragment from substantially 100% of the proteins or peptides in the unfragmented sample.
17. (Currently pending) A method according to claim 13 wherein the array has at least about 10, 50, 100, 150, 200, 250, 300, or more different types of binding molecules provided thereon.
18. (Currently pending) A method according to claim 13 wherein at least one type of the binding molecule is an antibody or a fragment or variant thereof.
19. (Withdrawn) A method according to claim 13 wherein at least one of the types of the binding molecule is an aptamer.
20. (Withdrawn) A method according to claim 13 wherein at least one of the types of the binding molecule is a polynucleotide.

21. (Currently pending) A method according to claim 1 wherein step (b) comprises characterising bound peptides, or protein or peptide fragments, at the defined and discrete locations on the array.
22. (Canceled)
23. (Canceled)
24. (Currently pending) A method according to claim 1 wherein step (b) comprises characterising the peptides, or protein or peptide fragments, in the heterogeneous classes by desorption mass spectrometry or collision induced dissociation mass spectrometry.
25. (Cancel)
26. (Currently amended) A method according to claim 4 3 wherein the information derived from step (b) is used to determine the abundance of the ~~parent~~ protein or peptide in the ~~unfragmented~~ heterogeneous sample from which the ~~detected protein or peptide fragment~~ the protein fragment or peptide fragment is derived.
27. (Currently amended) A method for identifying differences in composition between two or more heterogeneous fragmented or unfragmented samples of ~~peptides, or protein or peptide fragments~~ proteins, peptides, protein fragments or peptide fragments, comprising analysing each sample by the method according to claim 1 and comparing the results, thereby to identify any differences.

Claims 28-49 (canceled).
